PROFESSIONAL SUMMARY

Software QA Engineer with professional QA experience from 2023 to present, covering manual testing, automation testing and AI-driven QA workflows for web, mobile, desktop POS, ticketing, and reservation products. Skilled in Playwright, TypeScript, Selenium WebDriver, Java, Sikuli, API testing, Postman, k6, and CI/CD workflows. Experienced in building scalable automation frameworks, validating APIs, executing performance tests, designing test cases, supporting product improvement, and contributing to stable and reliable production releases in Agile/Scrum environments.

TECHNICAL SKILLS

Testing & QA: Manual testing, functional testing, regression testing, smoke testing, sanity testing, exploratory testing, cross-browser testing, mobile testing, desktop/POS testing, AI-driven QA workflow validation, STLC, SDLC, risk-based test planning, test case design, execution, and requirement coverage analysis

Automation: Playwright + TypeScript, Selenium + Java, TestNG, Sikuli image-based automation, Page Object Model (POM), reusable utilities, fixtures, locator strategy, page/action separation, parallel execution, retry handling, Allure reports, HTML reports, Cypress familiarity, Appium familiarity

API, Backend & Data: Postman, REST API testing, request/response validation, status code validation, payload checks, schema checks, authentication/session checks, business logic validation, negative scenarios, integration testing, and SQL-based data validation

Performance, CI/CD & Tools: k6, load testing, smoke/load/stress scenarios, response-time analysis, throughput checks, stability checks, performance threshold review, Git, GitHub, Sourcetree, GitHub Actions CI/CD, Jira, Asana, Agile/Scrum, MCP, Codex, Claude Code

QA Documentation & Collaboration: Requirement analysis, checklist preparation, test case preparation, defect reporting, release validation, sprint collaboration, client/product feedback handling, and product improvement support

PROFESSIONAL EXPERIENCE

Senior Software QA Engineer | Enosis Solutions | 2025 - Present | Dhaka, Bangladesh

- Lead manual, API, performance, and UI automation testing for an event ticketing and venue-management platform across web, backend, and release workflows, covering sprint testing, regression cycles, integration checks, and production-release readiness.
- Work with AI-driven QA workflows to support requirement analysis, checklist/test case preparation, regression planning, defect analysis, documentation improvement, and reusable automation coverage from validated product flows.
- Design and maintain Playwright TypeScript end-to-end UI automation suites using POM, reusable fixtures/utilities, stable locator strategies, test data handling, and scalable architecture to improve regression efficiency and maintainability.
- Perform API testing with Postman and validate REST API behavior, request/response payloads, authentication/session behavior, backend data, business rules, integrations, edge cases, and error handling.
- Plan and execute k6 performance tests to evaluate response time, throughput, stability, and system behavior under expected and high-load conditions, helping identify performance trends and potential bottlenecks before release.
- Review requirements, define test coverage, identify ambiguity or missing acceptance details, document defects with clear evidence, and coordinate with developers/product teams through release readiness and resolution.

Software QA Engineer | Enosis Solutions | 2023 - 2025 | Dhaka, Bangladesh

- Tested multiple product types, including desk reservation software, POS-based business applications, ticket-scanning applications, and event ticketing/management platforms across web, mobile, and desktop workflows while adapting coverage to each platform and user journey.
- Developed Selenium WebDriver automation scripts using Java and TestNG for desk reservation workflows and used Sikuli for image-based UI automation where DOM access or visual element recognition was required.
- Conducted manual testing for web applications, mobile applications, and desktop POS applications, covering functional, regression, smoke, sanity, cross-browser, device-focused, and transaction-style workflow scenarios.
- Worked as a full-time QA resource for an event ticketing and venue-management platform, collaborating with product and development teams on requirement clarification, test coverage, defect reporting, regression evidence, and release validation.

QA AUTOMATION PORTFOLIO

Playwright UI Automation Framework | [GitHub Project](#) | TypeScript / Playwright

- Built an end-to-end Playwright UI automation framework with Page Object Model structure, reusable fixtures, parallel execution, reporting, and GitHub Actions CI/CD integration.
- Structured the suite for maintainable regression coverage by separating page actions, test data, assertions, and reusable test utilities.

Playwright API Automation Framework | [GitHub Project](#) | TypeScript / Playwright

- Built a scalable REST API automation framework using Playwright and TypeScript with reusable API clients, authentication workflows, schema validation, negative testing, and reporting.
- Covered request/response validation, status codes, payload checks, error handling, and CI-ready execution for backend regression confidence.

Selenium UI Automation Framework | [GitHub Project](#) | Java / Selenium / TestNG

- Created a Selenium WebDriver framework using Java, TestNG, and Page Object Model for browser-based UI automation, regression testing, and reusable test components.
- Included framework-level practices such as organized test classes, reusable locators/actions, execution configuration, and maintainable automation structure.

k6 Performance Testing Framework | [GitHub Project](#) | JavaScript / k6

- Developed a modular k6 performance testing framework with smoke, load, and stress scenarios, custom metrics, thresholds, data-driven execution, and HTML reporting.
- Used performance scenarios to evaluate response time, throughput, stability, and early bottleneck indicators before release-critical testing.

Appium TypeScript Mobile Automation Framework | [GitHub Project](#) | TypeScript / Appium

- Developed a mobile automation framework using Appium and TypeScript with reusable components, platform-specific configurations, and scalable test structure.
- Designed the framework to support mobile regression workflows, device-specific behavior checks, locator strategy, and future cross-platform test growth.

EDUCATION

B.Sc. in Computer Science and Engineering | Islamic University of Technology (IUT) - OIC | 2019 - 2023 | CGPA: 3.5 / 4.0

LANGUAGES

English: Fluent | Bengali: Native
